

Technical Datasheet

MERFIX C, liq

Merfix C, liq is a cationic fixing agent

Characteristics

Appearance	Yellowish liquid
Chemical nature	Acrylic Polymer
Active Matter	Approximately 40%
Ionic charge	Cationic
pH (5% sol.)	5.0-6.0

Properties

Merfix C, liq is a cationic fixing agent for the fixation of dyes. Using Merfix C, liq an important improvement can be achieved in the uptake of dye. Also the wet fastnesses like washing- and perspiration fastness will be upgraded. Merfix C, liq can also be used in top dyeings.

Application

Merfix C, liq should always be used in a fresh float, since it precipitates with anionic substances present. Advice quantities vary between 0.5% (on shaved weight) to 1.0% (on dry weight). It is advised to dilute Merfix C, liq 10-20 times its weight before adding it to the drum.
