

Technical Datasheet

MERNEUTRAL B, powder

Merneutral B, powder is a buffering neutralization syntan

Characteristics

Appearance	Beige powder
Chemical nature	Naphthalene sulphonic acid condensate
Active Matter	Approximately 95%
Ionic charge	Anionic
pH (10% sol.)	6.5-7.5

Properties

Merneutral B, powder is a syntan which can be applied to neutralize wet blue. It has strong buffering power, and it can be used alone or together with neutralizing salts to adjust the pH. Merneutral B, powder is complex forming and neutralizes uniformly all over the cross section of leather. Merneutral B has a positive effect on the distribution and leveling of anionic products like dyes, other retanning syntans and vegetable tanning agents.

Application

Merneutral B can be used alone or in combination with other neutralizing products like sodium formate and sodium bicarbonate. Usual application amounts vary between 1-3%, based on shaved weight. To help to create a level dyeing, Merneutral B, powder is added to the drum 10 minutes before the addition of the dye.
