

Technical Datasheet

MERPENETRATE NI, liq

Merpenetrate NI, liq is a non ionic penetrating agent for dyes

Characteristics

Appearance	Clear liquid
Chemical Nature	Based on a Ethoxylated emulsifier
Active Matter	Approximately 40%
Ionic charge	Non-ionic
pH (5% sol.)	6.0-7.0

Properties

Merpenetrate NI, liq is a non ionic agent which helps the dye to penetrate the hide more easy and quick. Merpenetrate NI, liq is a dye-affine auxiliary, and has best effect if it is added at the same to the drum as the dye. Merpenetrate NI, liq has a positive influence on the solubility of the dye.

Application

Merpenetrate NI, liq can be added to the drum at the same moment but separately from the dye. In this case it should be dissolved 1:10 with water first. Merpenetrate NI, liq can also be mixed together with the dye solution before addition.
