

Technical Datasheet

MERSOFT GA, paste

Mersoft GA, paste is a fatliquor with dispersing properties and high softness

Characteristics

| | |
|-----------------|---------------------|
| Appearance | White paste |
| Chemical nature | Fatty Acid derivate |
| Active Matter | Approximately 30% |
| Ionic charge | Weakly anionic |
| pH (10% sol.) | 5.0-6.5 |

Properties

Mersoft GA, paste is a fatliquor with good dispersing properties. It is suitable in application for all leather types. It can create very soft leathers and is therefore especially well suitable to produce garment leather. Mersoft GA, paste is lightfast, and suitable for the production of white or pastel colored leathers. Mersoft GA, paste is able to disperse retanning agents, dyes and even pigments to a certain extent.

Application

Mersoft GA, paste is usually applied 2-4% based on shaved weight (wet blue weight). Mersoft GA, paste can be used alone or be mixed with other anionic fatliquors. Before adding it to the drum, Mersoft GA paste is emulsified with hot water. If it is combined with other fatliquors, it's advised to mix the fatliquors first, and emulsify thereafter.
