

Technical Datasheet

MERSOFT HS, liq

Mersoft HS, liq is a highly stable fatliquor for all leather types

Characteristics

Appearance	Yellowish oil
Chemical nature	Sulphonated oil
Active Matter	Approximately 50%
Ionic charge	Anionic
pH (10% sol.)	6.0-7.0

Properties

Mersoft HS, liq is a highly stable fatliquor which gives good softness. It can be used during tannage or retannage in the leather production of all leather types. Using it in an early stage of processing gives an advantage on the achieved softness, and prevents grain crack. Mersoft HS, liq has a positive effect on the leveling and distribution of anionic dyes and retanning agents.

Application

Mersoft HS, liq can be applied in the tannage or retannage of leather production. During tannage 1-3% is often applied, and during retannage higher amounts can be applied. Mersoft HS, liq can be used alone or be mixed with other anionic fatliquors. Before adding it to the drum, Mersoft HS, liq is emulsified 1:4 with hot water. If it is combined with other fatliquors, it's advised to mix the fatliquors first, and emulsify thereafter.
