

Technical Datasheet

MERSOFT NI, paste

Mersoft NI, paste is a Non Ionic fatliquor for very soft and light leathers

Characteristics

Appearance	Light brownish paste
Chemical nature	Phosphated triglycerides
Active Matter	Approximately 65%
Ionic charge	Non-ionic
pH (10% sol.)	7.5-8.0

Properties

Mersoft NI, paste is a non ionic fatliquor suitable for all kind of leathers which need to be soft or light. Mersoft NI, paste finds its application mostly in the production of garment leathers, upholstery and softy shoe upper leathers. It has the ability to make leather very soft and fluffy without adding weight to the leather. In the production of suede, Mersoft NI, paste will give a nice brilliant leather fiber. Producing nubuck, it won't lead to a too fatty nap.

Application

Mersoft NI, paste can be applied alone or be mixed with other non ionic or anionic fatliquors. Typical application quantities vary between 6% and 10% based on shaved weight (wet blue weight). Mersoft NI, paste needs to be emulsified with hot water (50-60°C) prior to addition to the drum. If it is combined with other fatliquors, it's advised to mix the fatliquors first, and emulsify thereafter.
